

Square: A Pizza Box or a Checkerboard

Pop
Wes Schuck

Chorus

1, 2, 3, 4 sides on a square, like there're four legs on a chair. If you draw a straight line, just add three more, and you'll be fine. It's eas - i - er than wres - tling a bear!

Verse 1

1. If you look, you'll see them eve - ry - where. The top of a piz - za box is square, Square tiles a - cross the bath-room floor, and col - ored squares on a check - er board.

Verses 2-4

2. Play-ing hop-scotch on the ground, squares are where the fun is found. If you're hun - gry, just look a - round. Crack - ers are tast - y squares to gob - ble down.

Chorus

Verse 3

There's a picture on the wall.
The frame is square, and that's not all.
A big square window to see outside.
Wooden blocks are piled up to the sky.

Spoken

A square is a kind of rectangle,
but not all rectangles are a square.
Look at them and compare.

They both have four sides.
A rectangle's can be long and short
while a square's are all one size.

Verse 4

When I'm dreaming in my bed,
a lot of shapes float around my head.
Circles, stars, and triangles are there,
but none is shaped quite like a square.

Chorus
